

Sub 17. (AMENDED) A pipe coupling for interconnecting adjacent ends of first and second pipe sections, the end of the first pipe section having an annular corrugation, said coupling comprising:

a generally cylindrical sleeve having first and second sides;

a1 at least one rigid annular corrugation on said first side of said sleeve being oriented perpendicular to a longitudinal axis of said sleeve and adapted to cooperatively engage the annular corrugation on the first pipe section end to secure said sleeve on the first pipe section; and

a bell on said second side of said sleeve being adapted to slidably receive in an axial direction the second pipe section end within said sleeve;

whereby said coupling is adapted to interconnect said adjacent ends of said first and second pipe sections.

Sub 18. (AMENDED) In combination, a pipe coupling and first and second pipe sections, the end of the first pipe section having an annular corrugation, and said coupling comprising:

a2 a generally cylindrical sleeve having first and second sides;

at least one rigid annular corrugation on said first side of said sleeve being oriented perpendicular to a longitudinal axis of said sleeve and adapted to cooperatively engage the annular corrugation on the first pipe section end to secure said sleeve on the first pipe section; and
